The listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

Claims 25-73 (canceled)

Claim 74 (currently amended)

A process for selecting transformed cells or tissue comprising:

- a) transforming plant cells or tissue that sensitive to galactose toxicity with one or more polynucleotide molecule encoding one or more enzyme useful to convert galactose to UDP-glucose;
- b) exposing the cells or tissue to galactose, wherein galactose is toxic to non-transformed cells or tissue; and
- c) selecting transformed cells or tissue that are insensitive to galactose toxicity.

Claim 75 (previously added)

The process of claim 74, wherein said one or more enzyme is one or more of:

- i) UTP-dependent pyrophosphorylase;
- ii) UDP-glucose-dependent uridyl transferase; and
- iii) galactokinase.

Claim 76 (currently amended)

The process of claim 74, wherein said one or more enzyme is two or more of:

- i.) UTP-dependent pyrophosphorylase;
- ii) UDP-glucose-dependent uridyl transferase; and
- iii) galactokinase.

Claim 77 (currently amended)

The process of claim 76, wherein said one or more enzyme is at least three of:

Applicant: JORSBOE ET AL.
Serial No.: 09/762,629
Amendment dated June 10, 2003
Reply to Office Action Feb. 12, 2003

- i) UTP-dependent pyrophosphorylase;
- ii) UDP-glucose-dependent uridyl transferase; and
- iii) galactokinase.

Claim 78 (previously added)

The process of claim 74, wherein said one or more enzyme comprises UTP-dependent pyrophosphorylase.

Claim 79 (previously added)

The process of claim 74, wherein one or more enzyme comprises UDP-glucose-dependent uridyl transferase.

Claim 80 (previously added)

The process of claim 74, wherein one or more enzyme comprises UTP-dependent pyrophosphorylase and UDP-glucose-dependent uridyl transferase.

Claim 81 (currently amended)

The process of claim 74, wherein said exposing comprises adding galactose to the cells in culture medium

Claim 82 (currently amended)

The process of claim 74, wherein said exposing comprises providing galactose-1-phosphate to the cells or tissue.

Claim 83 (currently amended)

The process of claim 74, wherein said exposing comprises providing UDP-galactose to the cells or tissue

Claim 84 (previously added)

Applicant: JORSBOE ET AL.
Serial No.: 09/762,629
Amendment dated June 10, 2003
Reply to Office Action Feb. 12, 2003

The process of claim 74, wherein said cells or tissue are further exposed to a galactosidase that produces galactose from a galactose precursor.

Claim 85 (previously added)

The process of claim 74, wherein said cells or tissue are incubated in a culture medium containing one or more galactose precursor selected from: lactose, melibiose, raffinose, stachyose, verbascose, galactinol, galactose pentaacetate and galactose methyl galactoside, and wherein said medium further comprises an enzyme that converts said precursor to galactose.

Claim 86 (previously added)

The process of claim 74, wherein said cells or tissue are incubated in a culture medium containing one or more galactose derivative selected from: galactose-1-phosphate and UDP-galactose.

Claim 87 (previously added)

The process of claim 74, wherein said plant cells or tissue are tobacco, cotton, rape seed, potato, or maize plant cells or tissue.

Claim 88 (previously added)

The process of claim 74, wherein said transforming further comprises transforming said cells or tissue with one or more heterologous nucleotide sequence of interest.

Claim 89 (previously added)

Transformed cells or tissue selected by the process of claim 74.

Claim 90 (previously added as claim 89)

A transformed plant comprising cells or tissue selected by the process of claim 74.
